

Nawat نواة

Project, service, and asset management. One platform,
built in the Kingdom.

Nawat Nexus is a Saudi software company. We build **Nawat (نواة)**, a work-management platform that unifies project and portfolio management, IT service management, and an asset register on a single data model, developed and hosted entirely inside the Kingdom.

Organizations that once ran three separate systems now run them as one, with a single leadership view across delivery and service.

Saudi company	Hosted in-Kingdom	Live in production	Bilingual
Nawat Nexus, CR 7054715961	Google Cloud, Dammam	Enterprise-ready	Arabic-first and English

The platform

Three capabilities on one foundation.

PPM Projects & Portfolio Workspaces, boards, timelines, risks, decisions, and OKRs, rolling up to an organization-wide portfolio.	ITSM Service Desk A service catalog, requests and tickets, approval chains, SLAs, and escalation. Run it alone or alongside projects.	CMDB Asset Register A configuration-item registry the other two reference, so a change shows its blast radius and an incident's priority follows the affected asset's criticality.
---	---	--

One data model

Projects, tickets, and assets share one database, so the links are native, not stitched across tools.

Why it fits a Saudi organization

In-Kingdom and compliant

Data resides in Saudi Arabia (Dammam), with Nafath national sign-in, handling aligned to the Personal Data Protection Law, and an append-only audit trail.

Aligned with Vision 2030

Keeps public-sector and enterprise data, and its value, inside the Kingdom.

Arabic-first

Genuine right-to-left and Saudi business register, not a translated English product.

Reachable and fast

Priced for organizations the global suites price out, live in days rather than multi-month rollouts.

One platform, one vendor, one contract, inside the Kingdom.

Built for enterprise trust

99.5% monthly uptime commitment	~11 min tested restore procedure	Dammam where the data resides
--	---	--

Identity

SSO (SAML / OIDC) with Azure AD, Okta, Keycloak. LDAP / Active Directory with group sync. Nafath. Enforceable MFA.

Security and compliance

Append-only audit log with export. SIEM streaming to Splunk, Microsoft Sentinel, Elastic, Datadog, Sumo Logic. Configurable login-lockout and password policy. External-collaboration controls.

Reliability

A 99.5% monthly uptime commitment on paid plans, automated daily backups with point-in-time recovery, and a tested restore procedure measured at about 11 minutes.

Getting started

Nawat is live in production and enterprise-ready. The next step is a short technical walkthrough with your team, followed by a scoped pilot on a real workflow, run to your security and procurement requirements.
